

(January 8, 2020) The Quantum Exchange team is excited to announce the launch of a new cryptocurrency exchange platform.

Quantum Exchange, focusing on **cryptocurrency only**, aspires to compete in the space by providing access to highly rated crypto assets and tokens; and implementing an advanced trading API.

Advanced Trading Engine

Extensive development has gone into delivering a high speed matching engine that rivals the bests of our time. Our matching engine is capable of performing **thousands of trades per microsecond**.

We want to please **algorithmic traders**; as such we have made sure our matching engine is capable of handling a wide range of execution options.

Institutional traders and exchanges, brokerages and OTC providers will have access to a robust set of open API's allowing them real time access to our trading engine and order book.

Assets Supported On Launch Date

At the moment we list Tether (**USDT**) and Dai Stablecoin (**DAI**) trading pairs and support the following crypto assets:

Bitcoin (**BTC**)

Bitcoin Cash (**BCH**)

Ethereum (**ETH**)

OmiseGo (**OMG**)

Augur (**REP**)

Basic Attention Token (**BAT**)

0X (**ZRX**)

Golem (**GNT**)

We will continue to add more assets in the following months according to the demand and feed-back we get from our users.

Fees

We charge **0% maker fees** and **0.4% or less** taker fees, depending on trading volume. We hope to attract traders with our **competitive trading fees and fast order execution**.

May this announcement serve as an invitation to traders of all kinds to give us a try. Your feedback would be highly appreciated; please write to us at hello@quantum.exchange.
